### Introduction

#### WHAT IS A QUICK START GUIDE

SMI-S is 2516 pages of reading spread across 8 books, plus it references another 14 or so DMTF profiles which amount to another 660 pages of reading. So, the question is where do you start? We have come up with a series of Quick Start Guides that are designed to help you get started by illustrating how to find useful SMI-S information in mock servers (mock ups of SMI-S server implementations). The Quick Start Guides don't illustrate EVERYTHING in the 3176 pages, but they give you a head start at finding some important items in SMI-S.

We currently have quick start guides for:

1. The Interop Namespace - What is it and what does it tell us?
2. Performance Information - Where do I find performance information in an SMI-S Server?
3. Capacity Information - Where do I find storage capacity information in an SMI-S Server?
4. Hardware Information - Where do I find hardware information in an SMI-S Server?
5. Product Information - Where do I find product information in an SMI-S Server?
6. Software Information - Where do I find software information in an SMI-S Server?

#### TOOL USED FOR THE QUICK START GUIDE ILLUSTRATION

The tool used for illustrating how to find information in SMI-S is the pywbemcli. It is a command line interface for accessing any CIM Server. It uses pywbem, an interface for python program access to any CIM Server. The pywbemcli and pywbem are python programs that use a set of python packages. Pywbem and the pywbemcli are actively being maintained and are available on Github.

We will be using the latest version of the pywbemcli in these guides. You can find documentation on the pywbemcli at the following website:

<https://pywbemtools.readthedocs.io/en/latest/>

## THE MOCK IMPLEMENTATIONS

The mock implementations mock selected autonomous profiles and some of their component profiles in SMI-S 1.8.0.

We currently have mock ups for the following autonomous profiles:

1. The SNIA Server Profile
2. The DMTF WBEM Server Profile
3. The Array Profile
4. The NAS Head Profile

And we plan on doing a Fabric (and Switch) mock up.

We chose to do mock ups of the SMI-S 1.8.0 versions of these profiles to illustrate differences between 1.8.0 and 1.6.1. We don't mock everything that is new in 1.8.0, but we do highlight some key changes ... like the DMTF WBEM Server profile, new indications and Advance Metrics (performance) for Arrays.

## HOW A GUIDE WORKS

The guide is a sequence of text explaining what we are looking for, followed by the command to obtain the information, followed by command output and then text that explains the output.

## THE QUICK START GUIDE FOR ARRAY SOFTWARE

In this guide we will be exploring software information provided by an SMI-S Server for an Array. The mock for the Array supports SMI-S 1.8.0.

This 6 page document highlights information that can be found in about 32 pages of SMI-S, the software and software inventory profiles in the Common book and disk drive lite profile in the block book of SMI-S.

In this script we will be working with beta3 of pywbem 1.0.0 and version 0.7.1 of pywbemtools (pywbemcli).

So, let's begin. First, we go to our virtual environment for beta3:

```
C:\Users\FarmerMike>workon beta3
(beta3) c:\Users\FarmerMike\devenv>
```

We are now in our virtual environment for beta3.

We will be working with a mock server that supports an SMI-S 1.8.0 Array. So, we need to establish a connection to the Array mock up:

```
(beta3) c:\Users\FarmerMike\devenv>pywbemcli -o table --name ArrayMock
Enter 'help' for help, <CTRL-D> or ':q' to exit pywbemcli or <CTRL-r> to search history,
pywbemcli>
```

In our command, I requested the default format of output to be in “table” format (-o table) and name the mock that I want (--name ArrayMock). The command worked and we get a pywbemcli prompt to start entering commands on the ArrayMock.

## SOFTWARE IDENTITIES

The elements that reports software information are instances of CIM\_SoftwareIdentity (and its subclasses).

So, we start by looking for classes that report software information (CIM\_SoftwareIdentity)

```
pywbemcli> instance enumerate CIM_SoftwareIdentity --pl
InstanceID,VersionString,Manufacturer,MajorVersion,MinorVersion,RevisionNumber
```

Instances: CIM_SoftwareIdentity					
InstanceID	MajorVersion	Manufacturer	MinorVersion	RevisionNumber	VersionString
"ACME "		"ACME Corporation"			"01.8.6"
"Software+CF2A5091300"					
"089"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_0"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_1"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_2"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_3"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_4"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_5"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_6"					
"ACME+CF2A5091300089+"		"ByteStor"			"ESOC"
"ACME+0_0_7"					
"ManagementServerSoft"	4	"SW Inc"	6	1	"V4.6.1.2"
"wareidentity"					

```
pywbemcli>
```

## WHAT THE SOFTWARE SUPPORTS

The next question to answer is what part of the Array does the software support.

We will determine this by iterating on the following command to determine logical elements supported by the software.

```
pywbemcli> -o mof instance shrub CIM_SoftwareIdentity.?
```

Pick Instance name to process
0: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME Software+CF2A5091300089"
1: root/cimv2:CIM_SoftwareIdentity.InstanceID="ManagementServerSoftwareIdentity"
2: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_0"
3: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_1"
4: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_2"

```

5: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_3"
6: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_4"
7: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_5"
8: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_6"
9: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_7"
Input integer between 0 and 9 or Ctrl-C to exit selection:

```

We will start with the first software element by selecting item 0

```

Input integer between 0 and 9 or Ctrl-C to exit selection: 0
CIM_SoftwareIdentity.InstanceID="ACME Software+CF2A5091300089"
+-- Antecedent(Role)
| +-- CIM_ElementSoftwareIdentity(AssocClass)
|   +-- Dependent(ResultRole)
|     +-- CIM_RegisteredProfile(ResultClass)(8 insts)
|       +-- /:CIM_RegisteredProfile.InstanceID="Array+1.8.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Block Server Performance+1.8.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Block Services+1.8.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Disk Drive Lite+1.8.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="FC Target Ports+1.8.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Multiple Computer System+1.2.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Physical Package+1.8.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Software+1.8.0"
+-- InstalledSoftware(Role)
  +-- CIM_InstalledSoftwareIdentity(AssocClass)
    +-- System(ResultRole)
      +-- CIM_ComputerSystem(ResultClass)(1 insts)
        +-- /:CIM_ComputerSystem.~,Name="ACME+CF2A5091300089"
pywbemcli>

```

We see the ACME Software has a CIM\_ElementSoftwareIdentity to a set of profiles. These are the Array profile and its component profiles. The ACME software is the provider code for the Array. The ACME Software also has a CIM\_InstalledSoftwareIdentity to a Computer System. The system is the top level system of the Array. This means the software is installed on the array.

Let's move on to the next software element:

```

pywbemcli> -o mof instance shrub CIM_SoftwareIdentity.?
Pick Instance name to process
0: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME Software+CF2A5091300089"
1: root/cimv2:CIM_SoftwareIdentity.InstanceID="ManagementServerSoftwareIdentity"
2: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_0"
3: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_1"
4: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_2"
5: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_3"
6: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_4"
7: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_5"

```

```

8: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_6"
9: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_7"
Input integer between 0 and 9 or Ctrl-C to exit selection:

```

We will now get information for the second software element by selecting item 1

```

Input integer between 0 and 9 or Ctrl-C to exit selection: 1
CIM_SoftwareIdentity.InstanceID="ManagementServerSoftwareIdentity"
+-- Antecedent(Role)
| +-- CIM_ElementSoftwareIdentity(AssocClass)
|   +-- Dependent(ResultRole)
|     +-- CIM_RegisteredProfile(ResultClass)(9 insts)
|       +-- /:CIM_RegisteredProfile.InstanceID="DMTF Profile Registration+1.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="IP Interface 1.1.1"
|       +-- /:CIM_RegisteredProfile.InstanceID="Indications+1.2.2"
|       +-- /:CIM_RegisteredProfile.InstanceID="Job Control 1.0.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Profile Registration+1.7.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Role Based Authorization 1.0.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Server+1.7.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="Simple Identity Management 1.1.0"
|       +-- /:CIM_RegisteredProfile.InstanceID="WBEM Server 1.0.1i"
+-- InstalledSoftware(Role)
  +-- CIM_InstalledSoftwareIdentity(AssocClass)
    +-- System(ResultRole)
      +-- CIM_System(ResultClass)(1 insts)
        +-- /:CIM_System.~,Name="10.336.643.144"
pywbemcli>

```

We see the Management Server Software has a CIM\_ElementSoftwareIdentity to a set of profiles. These are the WBEM Server and SNIA Server profiles and their component profiles. The Management Server software is the provider code for the interop namespace. The Management Server Software also has a CIM\_InstalledSoftwareIdentity to a System. The system is the system of the server profiles. This means the software is installed on the server system.

Let's move on to the next software element:

```

Let's move on to the next software element:
pywbemcli> -o mof instance shrub CIM_SoftwareIdentity.?

```

```

Pick Instance name to process
0: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME Software+CF2A5091300089"
1: root/cimv2:CIM_SoftwareIdentity.InstanceID="ManagementServerSoftwareIdentity"
2: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_0"
3: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_1"
4: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_2"
5: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_3"
6: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_4"
7: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_5"

```

```
8: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_6"  
9: root/cimv2:CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_7"  
Input integer between 0 and 9 or Ctrl-C to exit selection:
```

We will now get information for the second software element by selecting item 9

```
Input integer between 0 and 9 or Ctrl-C to exit selection: 9  
CIM_SoftwareIdentity.InstanceID="ACME+CF2A5091300089+ACME+0_0_7"  
+-- Antecedent(Role)  
  +-- CIM_ElementSoftwareIdentity(AssocClass)  
    +-- Dependent(ResultRole)  
      +-- CIM_DiskDrive(ResultClass)(1 insts)  
        +-- /:CIM_DiskDrive.~,DeviceID="ACME+0_0_7",~,~  
pywbemcli>
```

We see the ByteStor Software has a CIM\_ElementSoftwareIdentity to a disk drive. The ByteStor software is the firmware for the disk drive.

Notice that the ByteStor Software does NOT have a CIM\_InstalledSoftwareIdentity to anything. This is because it would be redundant with the CIM\_ElementSoftwareIdentity. That is, the firmware is on the disk drive.
